Double Click is a lightweight yet effective software solution that was designed to enable computer users to change the middle mouse button's default action to double-click whenever it's pressed. The application is portable, meaning that you don't need to install it on the target computer. Simply unpack the archive it comes in and launch the executable in order to make use of its capabilities.

More so, it can also be used from removable storage units such as external HDDs or SSDs and USB flash drives. It won't tamper with your Windows registry entries. All you have to do in order to benefit from this application's capabilities is launching the executable after extracting it from the archive onto your computer. The program automatically changes the action triggered by pressing the middle mouse button to the action of double-clicking the left mouse button, so that the left mouse button doesn't wear off just as fast and your joints don't suffer from repeatedly clicking it. The application doesn't have a proper GUI (Graphical User Interface), so you can't really close it after you're done using it. However, launching the Task Manager and killing the app from there proved to be effective.

HAYWARD — What will be the future growth of more than 45,000 students attending Hayward schools in both kindergarten and seventh grades — 65 percent of them African-American and Latino students — during the next two decades? The year-long study, undertaken by the department of education, started last fall with a \$3.3 million grant from the Bill & Melinda Gates Foundation. Six teams have been set up around the district to look at particular aspects of the issue, with multiple stakeholders from parents, teachers, school administrators, and public and private partners, included. A district-wide workshop aimed at the whole community, including parents, is scheduled for today. The goal is to foster more “community-based, innovative solutions” to meet “the complex issues that lead to school success and preparedness for young people in the 21st century,” according to an agency press release. “There is a great enthusiasm and partnership among the district’s schools, families, and community,” said Rose Olvera, district’s chief academic officer and interim superintendent. “We are excited about the opportunity to gather data and collaborate to understand the needs of students in our schools and the capacity of Hayward schools to serve them as well as possible.” Initially, the findings were intended to be presented to the district’s board of trustees during its meeting at 2 p.m. today. The program's options in terms of what it's capable of are provided in the next two tabs. The first tab's options comprise general settings, whereas the second tab's options comprise settings related to the action of the middle mouse button in Windows. Most importantly, you have the option to set the middle mouse button's default action to one of the 3 following actions: right-click, left-click, and middle-click.

General Settings: In the first tab, you can change its name, its short description, the executable's filename, its program icon's size (32x32, 128x128, 512x512, 1024x1024, etc.), its shortcut's name, its position in the system's menu's application list, its position in the right-click menu's application list, its position in the context menu's application list, and whether the tool's window should be always on top (an option that you'll have when the program's shortcut is added into the context menu).

Middle Mouse Button Settings: In the second tab, the utility comes with 5 options, none of which is relevant to the functionality of the middle mouse button. Still, you might use the ones that are relevant to you. These are the specific options of your decision: The speed of the middle mouse button's action The delay before the action begins The delay before the action ends The number of simultaneous actions Despite being basically useless, the last option might help you save some time when you're double-clicking several files, especially if you're using a file manager that doesn't have a pre-defined speed at which all its files are being selected.

Keyboard shortcuts: If you're a Windows user, you might already know about how to change the default action of the middle mouse button. In case you don't know how to do that, Double Click enables you to generate a keyboard shortcut that can be used to change the middle mouse button's default action (as mentioned in the settings section, the application comes with 3 actions: right-click, left-click, and middle-click). All you have to do is to create the shortcut (right-click on the desktop, then press New
